Full-Stack Developer

Education

George Mason University - <i>B.S. Neuroscience</i>	2016
George Washington University Boot Camp - <i>Full-Stack Development Certificate</i>	2020
AWS Certificate - <i>Certified Cloud Practitioner</i>	2024

Technical Skills

Frontend: HTML, CSS, JavaScript, React, Tailwind CSS, Ant Design

Backend: Python (Flask), Node.js (Express), SQLAlchemy, PostgreSQL, MongoDB, REST APIs

Testing & Automation: Cypress (E2E), GitLab CI/CD

Security & Compliance: STIG/SRG compliance, IV&V processes, Accessibility (WCAG)

Professional Experience

JDSAT - *Full-Stack Developer* 2021 - Present

- Led development of a government web app (React + Flask + SQLAlchemy) ensuring efficiency, scalability, and stable backend performance.
- Built automated testing with Cypress, reducing manual QA efforts and enhancing reliability.
- Implemented WCAG standards, improving usability and inclusivity across the application.
- Managed deployments through Gitlab CI/CD, maintaining secure delivery pipelines within the government cloud infrastructure.
- Performed STIG compliance reviews and supported IV&V checks to maintain security, reliability, and Authority to Operate (ATO).
- Partnered with clients in recurring meetings to resolve issues, gather requirements, and align technical solutions with mission needs.
- Developed an internal tool to generate PDFs from Excel inputs, significantly simplifying document preparation workflows.
- Developed advanced web platforms featuring Gantt charts, interactive maps, and analytics dashboard to support large-scale data analysis.

Howard Hughes Medical Institute - *Research Analyst* 2017 - 2020

- Conducted neural analysis and electron microscopy (EM) data processing for the Drosophila connectome project, identifying CNS structures and addressing imaging inconsistencies.
- Contributed to dataset creation and analysis for a published research paper, "A Connectome and Analysis of the Adult Drosophila Central Brain".

Projects

PREP - Portal for Readiness and Emergency Preparedness

- Navy Medicine web app enabling Emergency Managers and PHEO to collect data, track training, and generate readiness reports across MTFs, consolidating Emergency Preparedness, Anti-Terrorism, and NDMS into a secure, scalable platform with automated dashboards and document management.

Technologies: React, Flask, SQLAlchemy, PostgreSQL, Gitlab CI/CD, MIP-SF (DoD cloud hosting)

TEEP - Training Exercise & Employment Plan

- Navy Medicine web providing data visualization of unit assignment schedules, training phases, event timelines, and unsourced requirements through an interactive Gantt chart.

Technologies: React (Vite), Flask, Gitlab CI/CD, MIP-SF (DoD cloud hosting)

Amazon Clone

- Frontend clone of Amazon website with cart functionality to demonstrate UI development and state management.

Technologies: React, Github Pages
